DESCRIPTION
This invention relates to a portable hydro-electrical turbine with deformable paddles, which can be used in small waterfalls, streams, rivers, and other water bodies. The turbine is designed to be easily installed and removed, and it can be used in a variety of environments. The invention is based on the principle of the water wheel, but it uses a unique design for the paddles that allows them to deform and adapt to the flow of water. This results in a more efficient and reliable turbine that can be used in a wide range of conditions.

ADVANTAGES
The invention has several advantages over traditional hydro-electrical turbines. First, it is portable and easy to install, making it ideal for use in remote areas. Second, it is designed to be used in a variety of environments, including small waterfalls and streams. Third, the deformable paddles allow for a more efficient and reliable turbine that can be used in a wide range of conditions.

APPLICATIONS
The invention can be used in a variety of applications, including power generation in remote areas, power generation in small waterfalls and streams, and power generation in a variety of environments. The invention is particularly well-suited for use in areas where traditional power sources are not available.
